SUMMARY REPORT ON EVENT ORGANIZED
Academic Year 2020-21

Date of Event Organized	03.02.2021 to 04.02.2021
Title of the Event	Two day workshop on "CYBER SECURITY"
Resource Person Details	Dr D.SAI SATISH Founder & CEO of Indian Servers, Vijayawada
Brief Report on the Event	<p>He told that Cyber security refers to the body of technologies, processes, and practices designed to protect networks, devices, programs, and data from attack, damage, or unauthorized access. Cyber security may also be referred to as information technology security. is important because government, military, corporate, financial, and medical organizations collect, process, and store unprecedented amounts of data on computers and other devices. Elements of cyber encompass all of the following:</p> <p>Network security: The process of protecting the network from unwanted users, attacks and intrusions.</p> <p>Application security: Apps require constant updates and testing to ensure these programs are secure from attacks.</p> <p>Endpoint security: Remote access is a necessary part of business, but can also be a weak point for data. Endpoint security is the process of protecting remote access to a company's network.</p> <p>Data security: Inside of networks and applications is data. Protecting company and customer information is a separate layer of security.</p> <p>Identity management: Essentially, this is a process of understanding the access every individual has in an organization.</p> <p>Database and infrastructure security: Everything in a network involves databases and physical equipment. Protecting these devices is equally important.</p> <p>Cloud security: Many files are in digital environments or "the cloud". Protecting data in a 100% online environment presents a large amount of challenges.</p>

REC **Ramkumar T is presenting**

Blockchain solutions beyond Finance

- Power**
 - Power value chain including generation, transmission, distribution, retail, peer-to-peer transactions and smart meters can benefit from blockchain.
- Supply Chain**
 - Supply chain visibility across a broad global supply base, which is especially challenging for companies like auto and aerospace OEMs.
- Agriculture**
 - Visibility across complex global agricultural value chains, integrity and fair treatment of value chain participants.
- Healthcare**
 - Electronic medical records, clinical trial management, creation of certified value chain visibility forums for pharma and medical devices.
- Public sector**
 - Asset registration and registration, corporate registration, citizen identity, voting, taxation, customs and citizen healthcare management systems.

Four core building blocks of blockchain

A shared ledger: The shared ledger appends only the distributed transaction record.

Cryptography: Cryptography in a blockchain ensures authentication and verifiable transactions.

Trust systems or consensus: Trust systems refer to using the power of the network to verify transactions.

Business rules or smart contracts: Smart contracts are the business terms that are embedded in a blockchain. This is also the rules component of a blockchain solution. It is needed to define the flow of value and state of each transaction.
