Learning beyond the Classroom: Students at Industry

Name of the Company: INCAP Pvt. Ltd.

Our industrial visit to INCAP Limited in Nidamanur, Vijayawada, was a refreshing departure from our regular classroom sessions. As we arrived at the facility, the first thing that struck me was the environment. The 2.5-acre campus was surprisingly green, well-maintained, and quiet, effectively dispelling my initial stereotype of a noisy industrial factory. We were welcomed by the technical staff who gave us a brief safety induction, setting a professional tone for the rest of the visit. It was exciting to finally step onto the floor where the components we study in theory are actually brought to life.

The highlight of the tour was the production line for Aluminium Electrolytic Capacitors, where we watched high-speed machines wind aluminium foil and seal it into cans with incredible precision. In addition to the capacitors, we were introduced to their Composite Insulator division, where they manufacture massive high-voltage components for power lines. We learned that INCAP has been established since 1992 and supplies these critical components to prestigious clients like the Indian Railways and Power Grid Corporation, which speaks to their reliability. Seeing the contrast between the tiny electronic capacitors and these huge insulators under one roof was impressive, and the guide's mention of their ISO 9001 certification further emphasized the strict quality standards they maintain.

Overall, the visit to INCAP Limited was an eye-opener that successfully bridged the gap between our textbooks and the real world. It was one thing to draw circuit diagrams in class, but a completely different experience to witness the engineering, logistics, and quality control involved in creating the actual hardware. I left the facility with a much better

understanding of the scale required in the electronics industry and a new appreciation for the safety and discipline of a professional engineering environment.
